

Name: _____ Date: _____

PART 1: Decide which unit of measurement would make the most sense to measure the volume of liquid shown in each picture.

Milliliters (mL)	Liters (L)
------------------	------------

1. I would use _____ to measure the liquid in a jug of laundry detergent.

2. I would use _____ to measure the liquid in a can of soup.

3. I would use _____ to measure the liquid in an eye dropper bottle.

4. I would use _____ to measure the liquid in a large soda bottle.

PART 2: Read each question and circle the answer you think is correct. Remember that there are 1000 milliliters in 1 liter.

1. Which volume is less: 400 milliliters or 1 liter?
2. Which volume is greater: 16 milliliters or 10 liters?
3. Which volume is less: 50 milliliters or 50 liters?
4. Which volume is greater: 1,000 milliliters or 1 liter?

Part 3: Bonus!!

Sarah is at the grocery store and wants to buy a bottle of fruit punch. She sees two bottles of fruit punch: one bottle is 950 milliliters and the other bottle is 1 liter. Each bottle costs the same price. Which bottle should Sarah buy to get the best deal? Why?
